

BOP CONTROL SYSTEM

DELIVERING ADVANCED MODERN CONTROL SYSTEMS

Secure your oil rig operations with the SMEC BOP control system. Our BOP control system will prevent well kicks and any other explosion that will be caused due to the liquid surfacing. SMEC provides a BOP control system for subsea, platforms, and also for land.

WHY SMEC?

Specifications:

- PLC-based BOP control panels
- SMEC BOP control system is composed of ring topology networking and this will improve the system redundancy
- Electric and hydraulic lines
- Pump modules are electric motor-driven
- The accumulator module is designed in a way that it can occupy the hydraulic control manifold, electric pump, etc.
- Control pods and test valves
- Provide security against the cybersecurity threats
- HMI system which will be compatible with the existing control panels
